

2、4度C暖化情境對臺灣地區空氣品質的影響

蔡宜君¹、謝佩蓉^{1,2}、鄭兆尊²、許晃雄¹、童裕翔²、陳永明²

1.中央研究院環境變遷研究中心 / 人為氣候變遷專題中心
2.國家災害防救科技中心

臺灣地區空氣品質

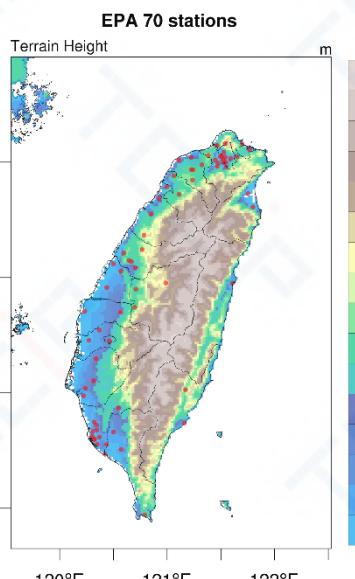

■ 9月到隔年4月，容易發生高污染；

夏季空氣品質佳

■ 對敏感族群不健康日數(AQI>100 days)：

– 北部、竹苗：春季, 10 days/mn.

– 南部：秋冬季, ≥ 20 days/mn.

2005-2021 AQI($O_3, PM_{2.5}$)>100 days LST

Data coverage ≥ 70% (months/all and 20 days/month)

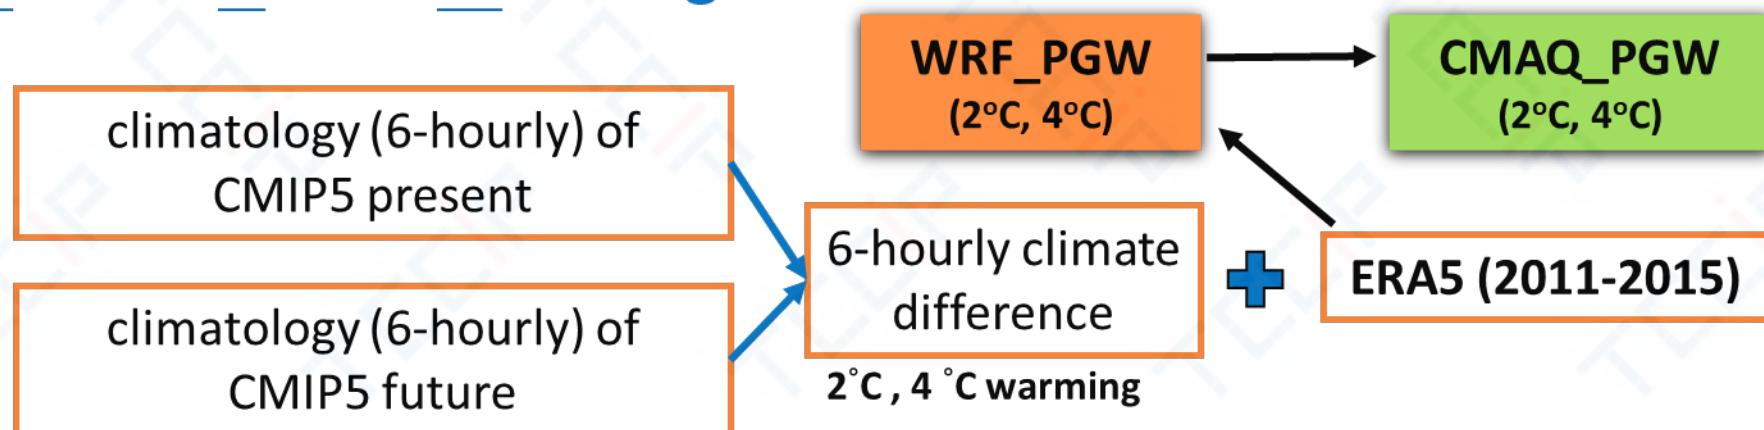

數值實驗設計

- 以中尺度模式進行3組動力降尺度，以CMIP5模式系集平均當作初始及邊界條件
- 數值實驗：2011–2015年(CTRL run)及2組暖化情境（2度、4度）

CTRL run

Pseudo Global Warming run

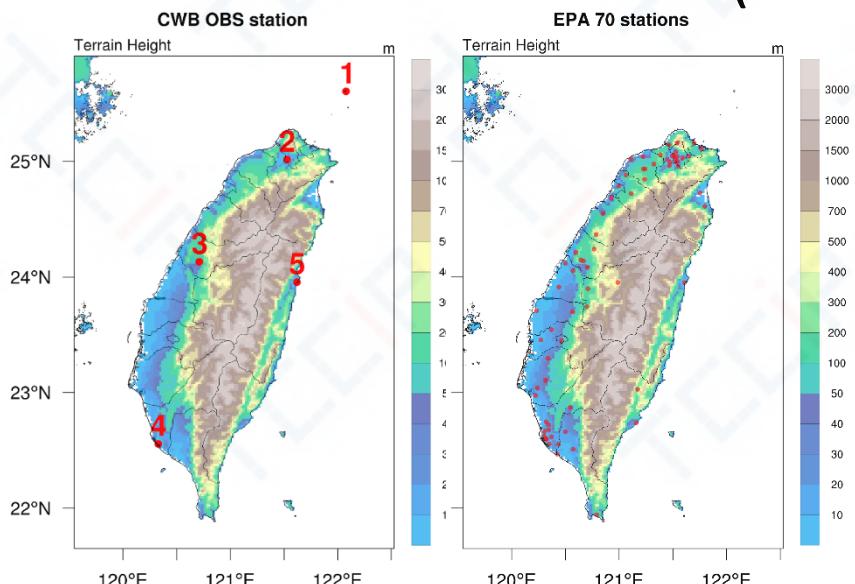

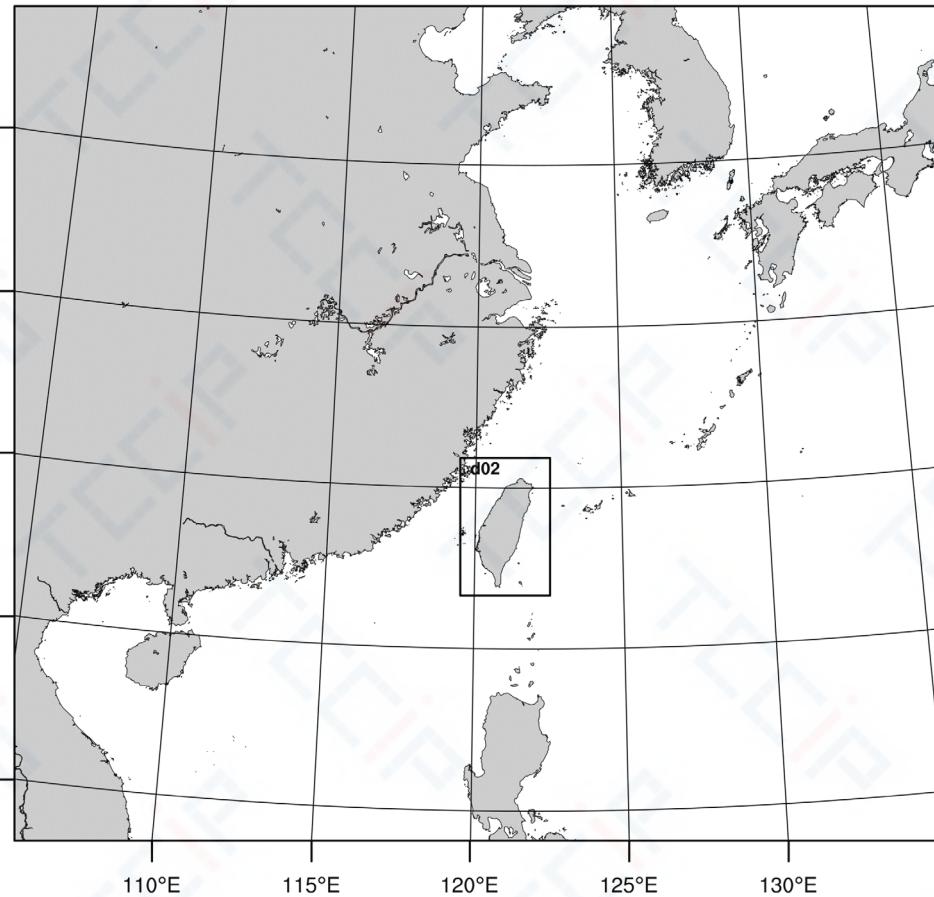

數值實驗及觀測資料

■ Horizontal resolutions : 10 km and 2 km

■ Observational datasets :

- Central Weather Bureau (CWB) : hourly data
- Taiwan Climate Change Projection and Information Platform (TCCIP) : 1-km resolution, daily data
- Environmental Protection Administration (EPA) : hourly data

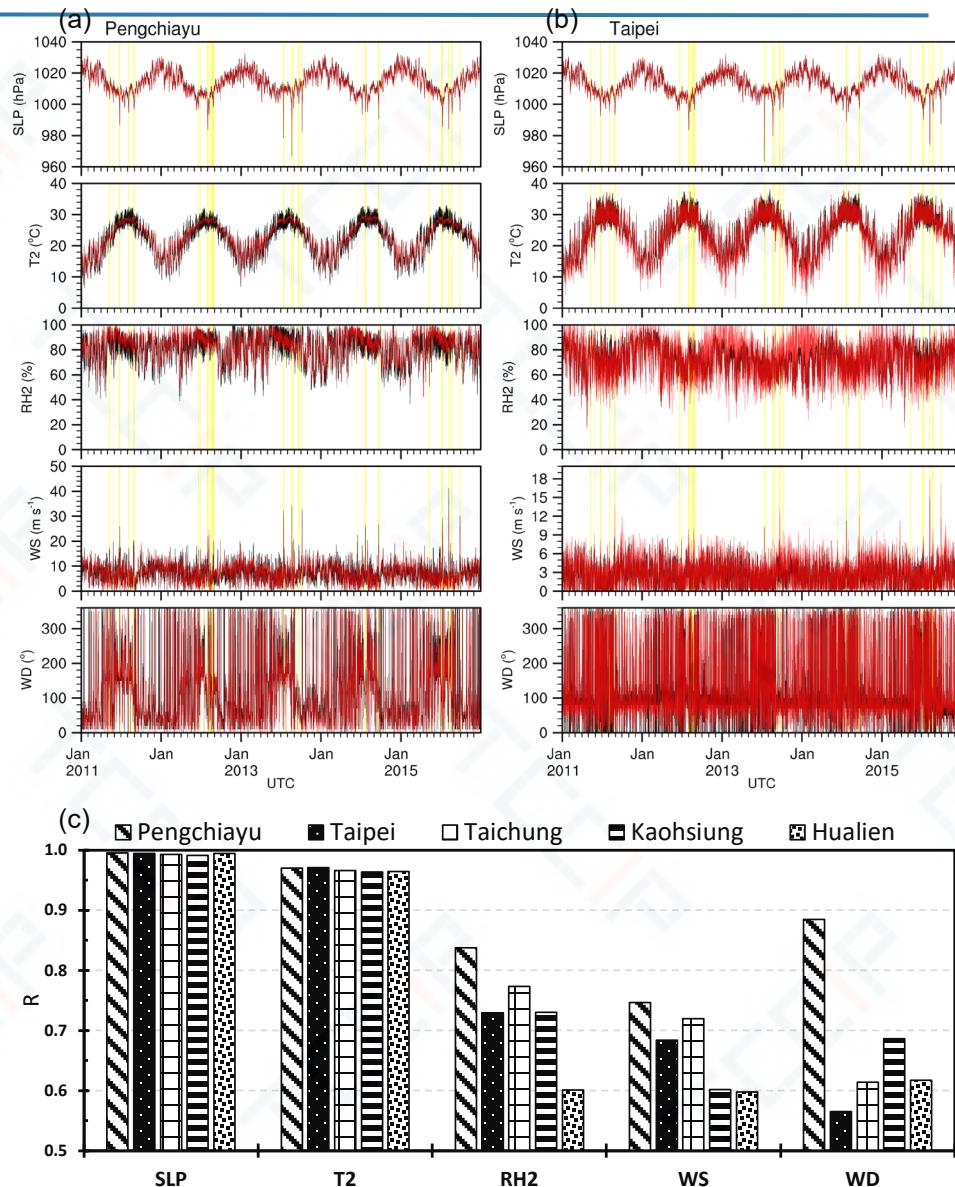

模式驗證(I) 氣象場

■ 5 CWB stations SLP and 2m-T :
 $R > 0.96$, RMSE = 0.70 hPa and 1.62°C

- Pengchiayu : (background condition)
The R of 2m-RH, WS, and WD : 0.75 – 0.84.
- Urban (Taipei, Taichung, and Kaohsiung) and rural (Hualien) stations :
R of 2m-RH, WS, and WD : 0.6 – 0.8

■ Considering the good performance of the WRF model in depicting the present climate conditions during 2011–2015, we further applied the WRF model to project climate changes under different warming scenarios

模式驗證(II) 空氣品質

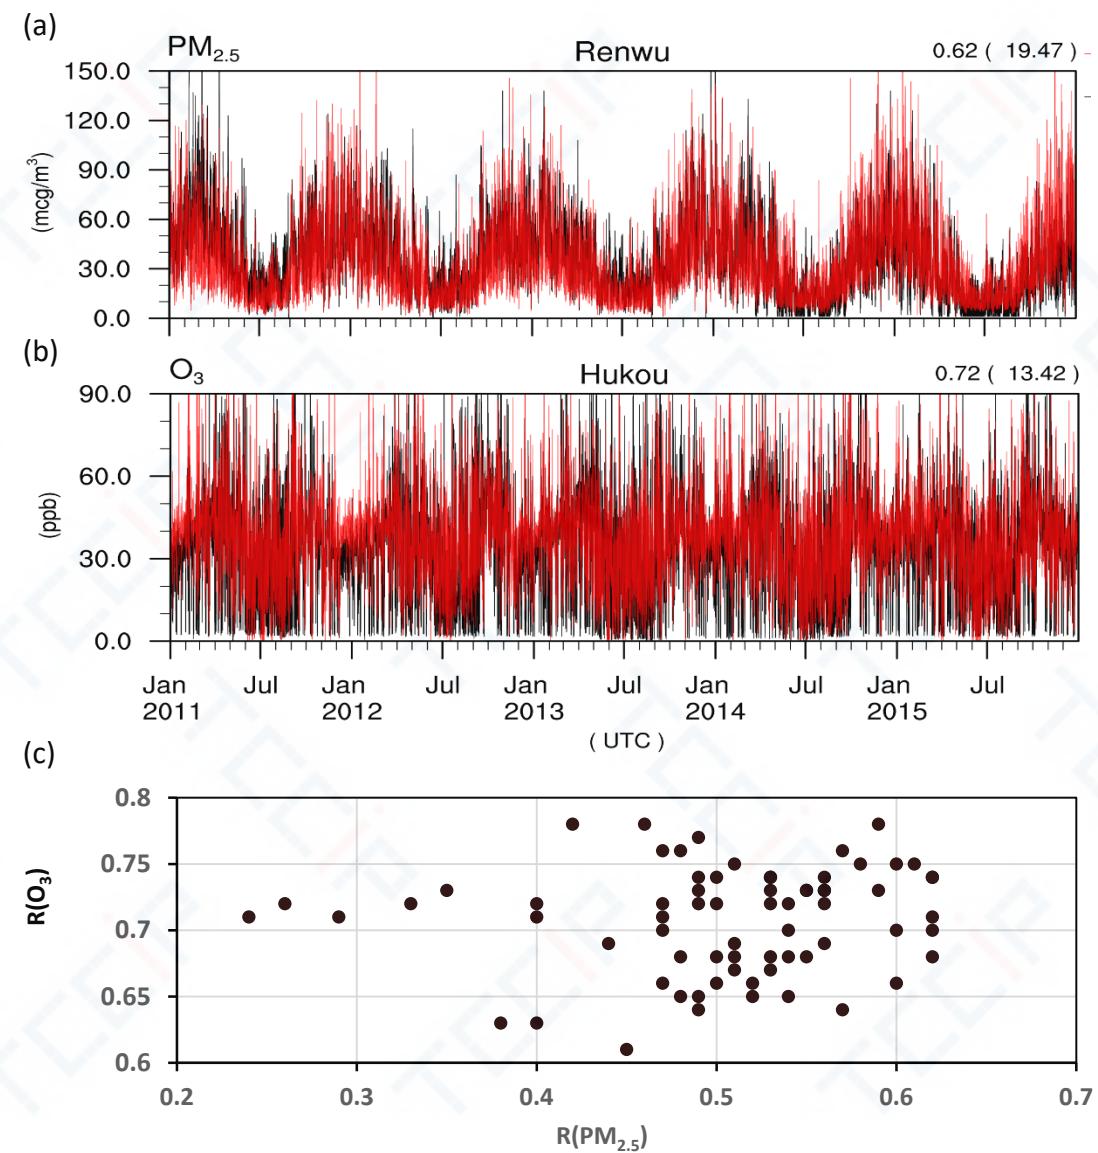

EPA stations

—PM_{2.5} : Sep – Apr

R_{PM2.5} 0.24 ~ 0.62 (0.50)

—O₃ Mar – Apr , Sep – Oct

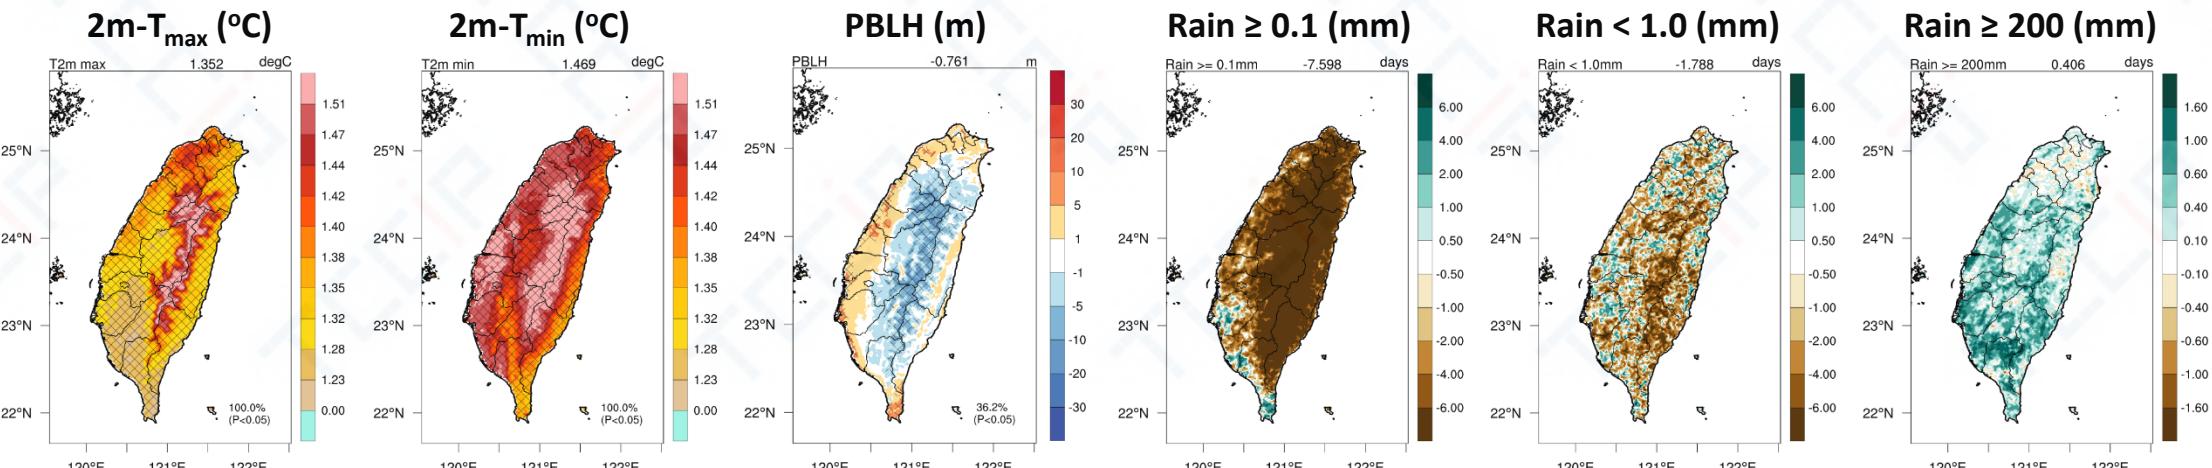

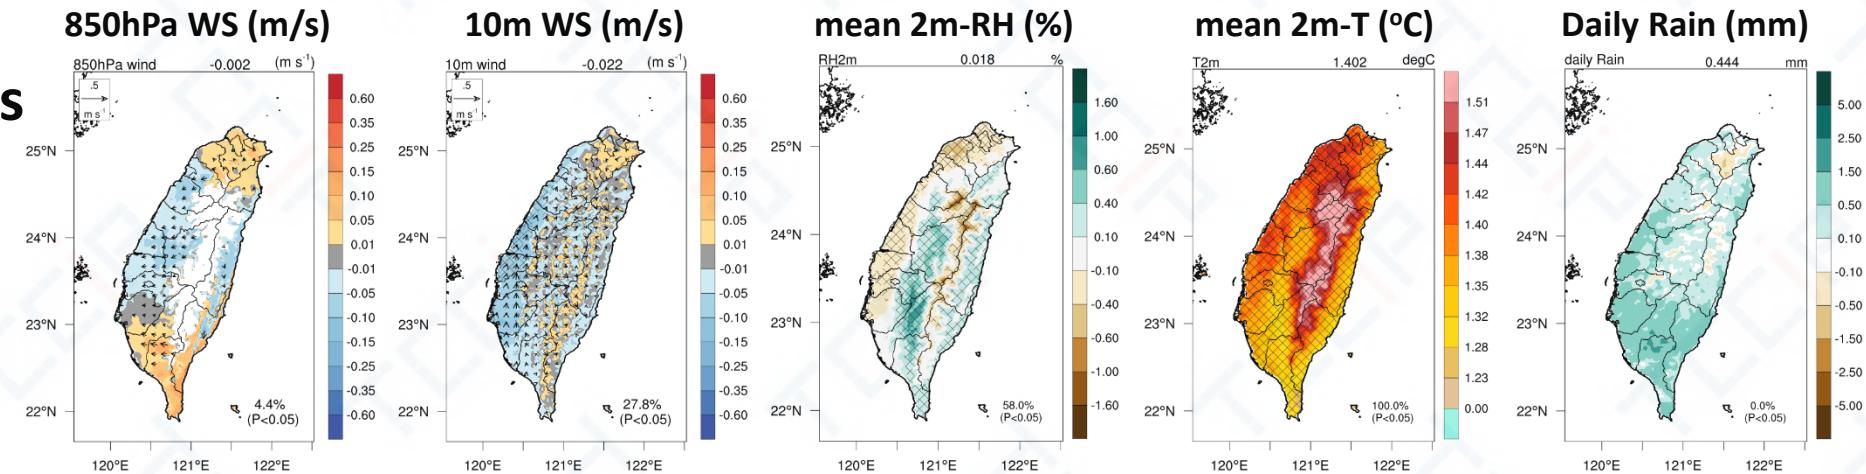

R_{O3} : 0.61 ~ 0.78 (0.71)

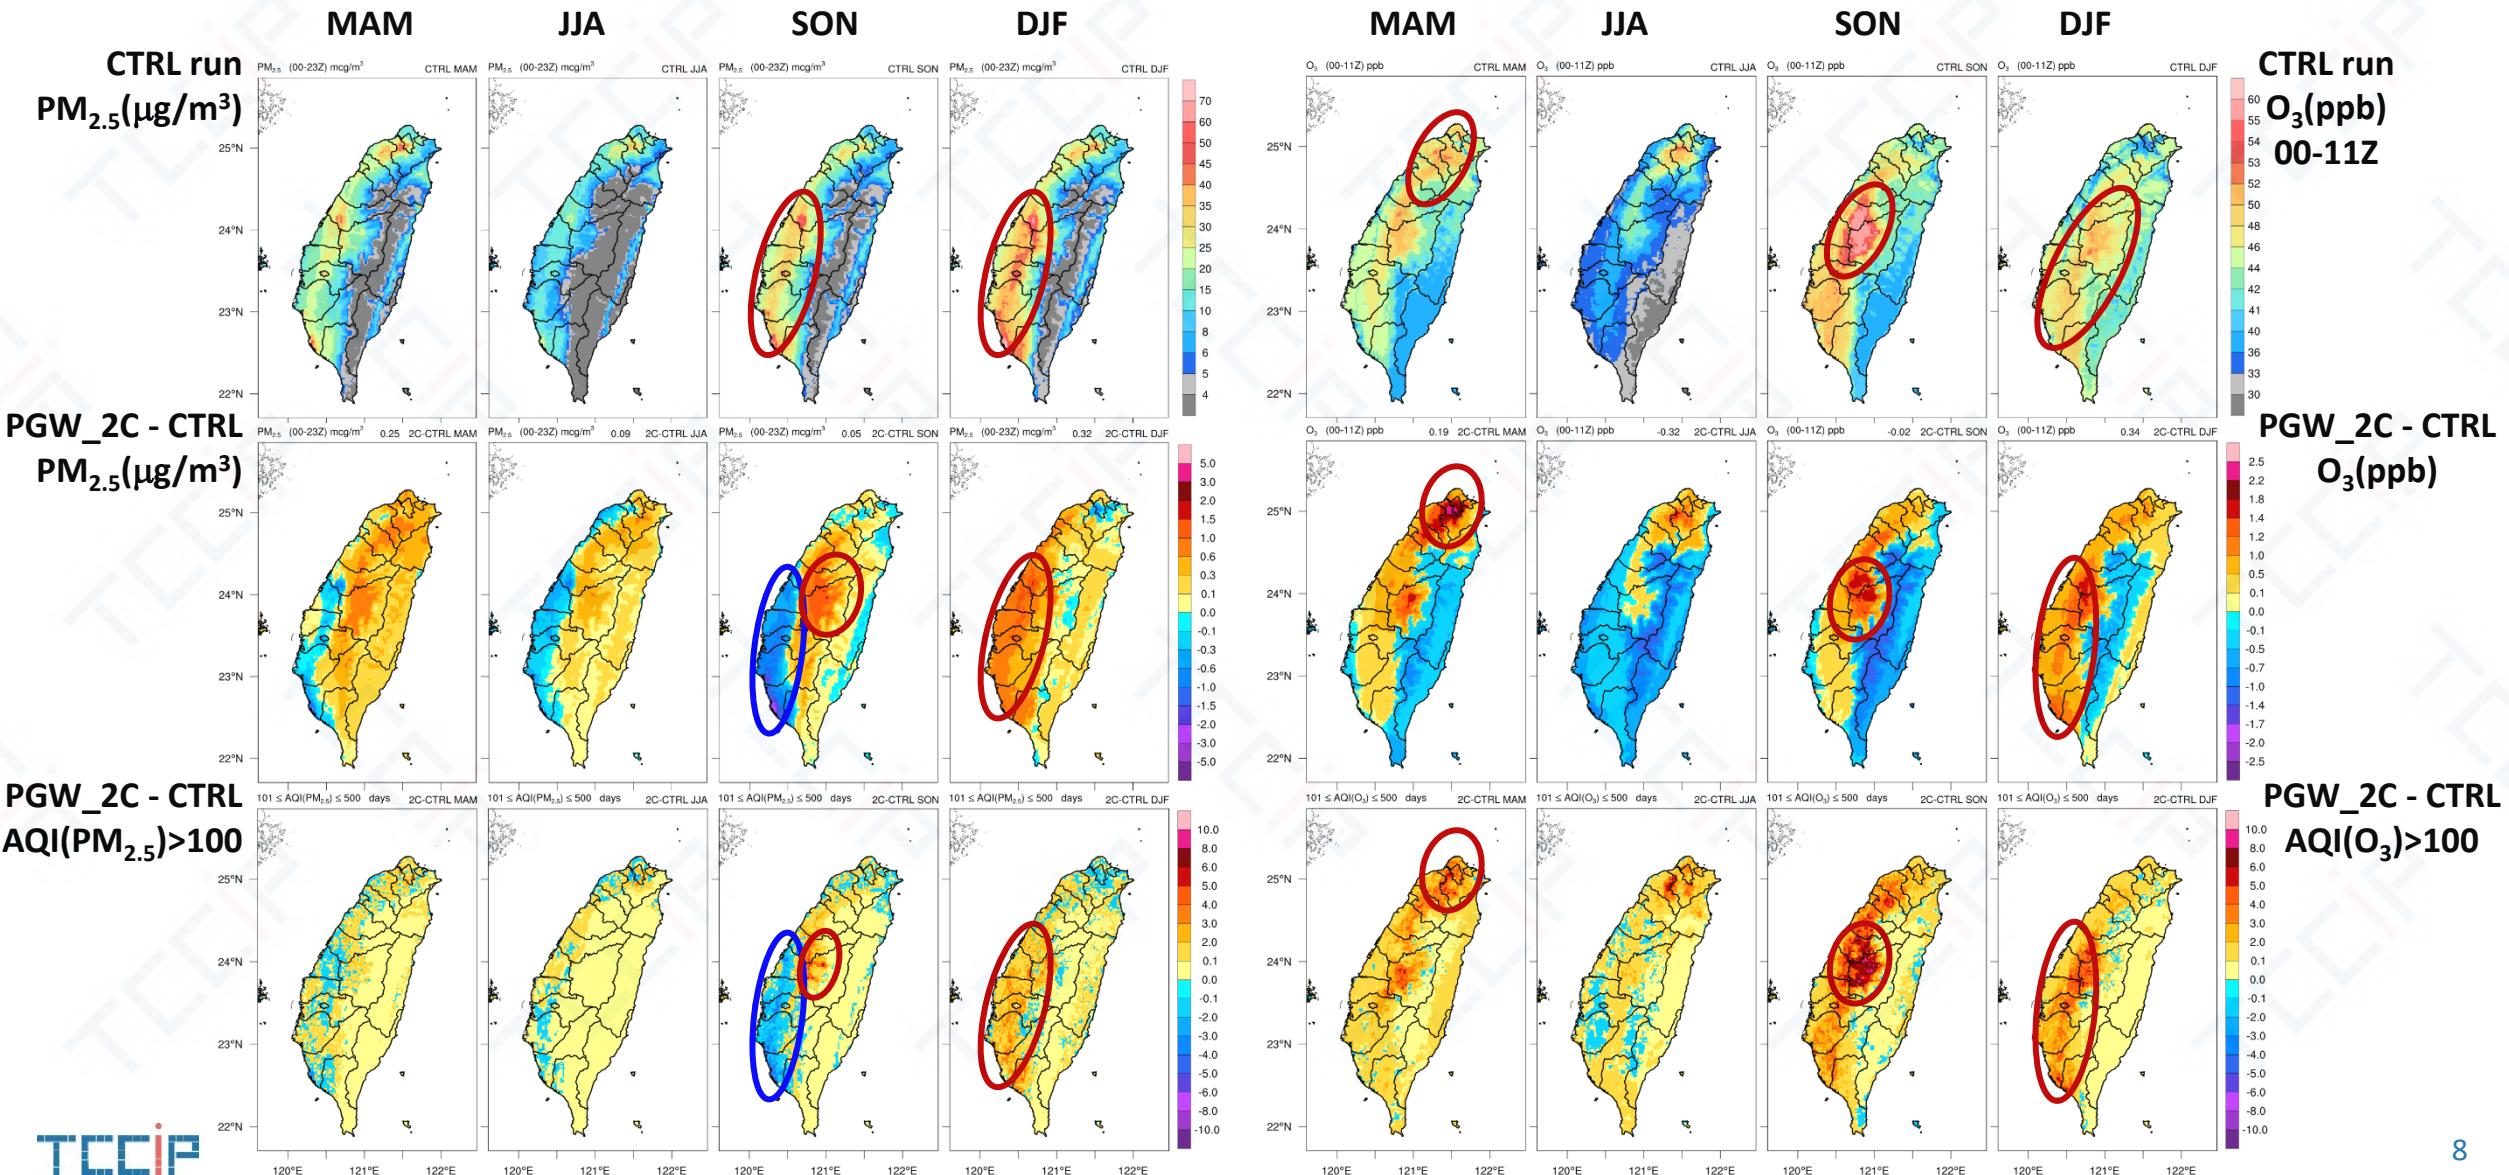

氣象場變化

- 10m wind: decreased in western coastal areas.
- T2m max, min, mean: increased especially over the mountain areas.
- Precipitation:
fewer rainy days,
more heavy rainy days

(2C暖化情境)

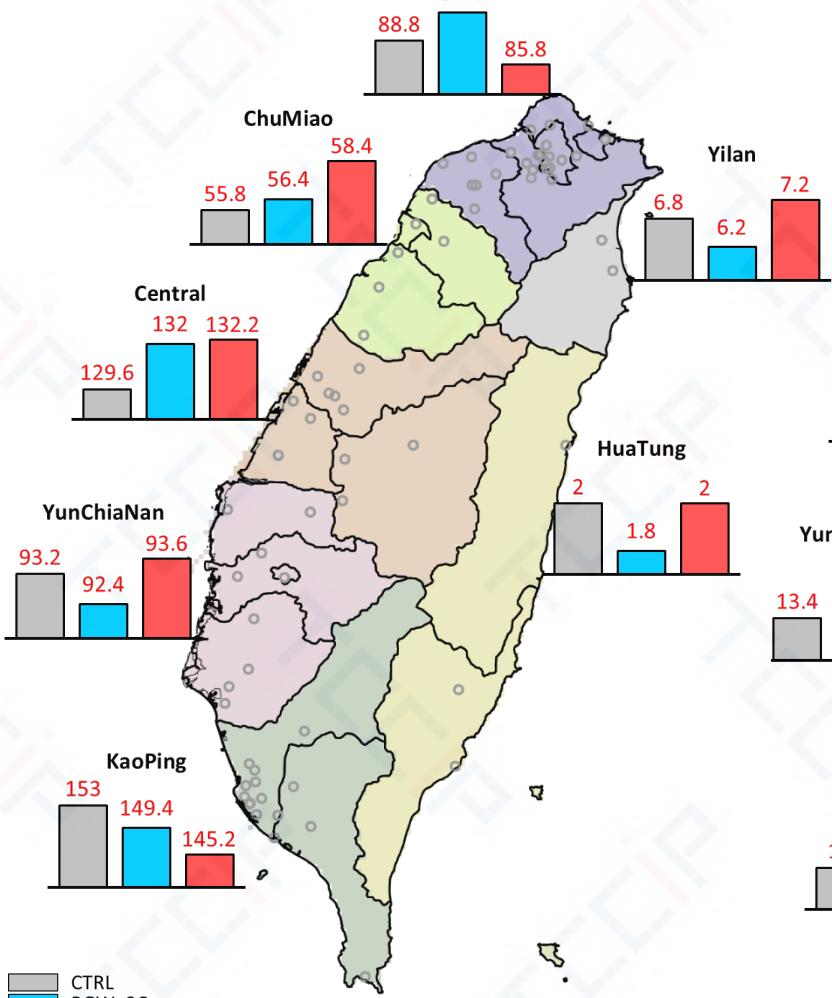

PM_{2.5} & O₃ 變化

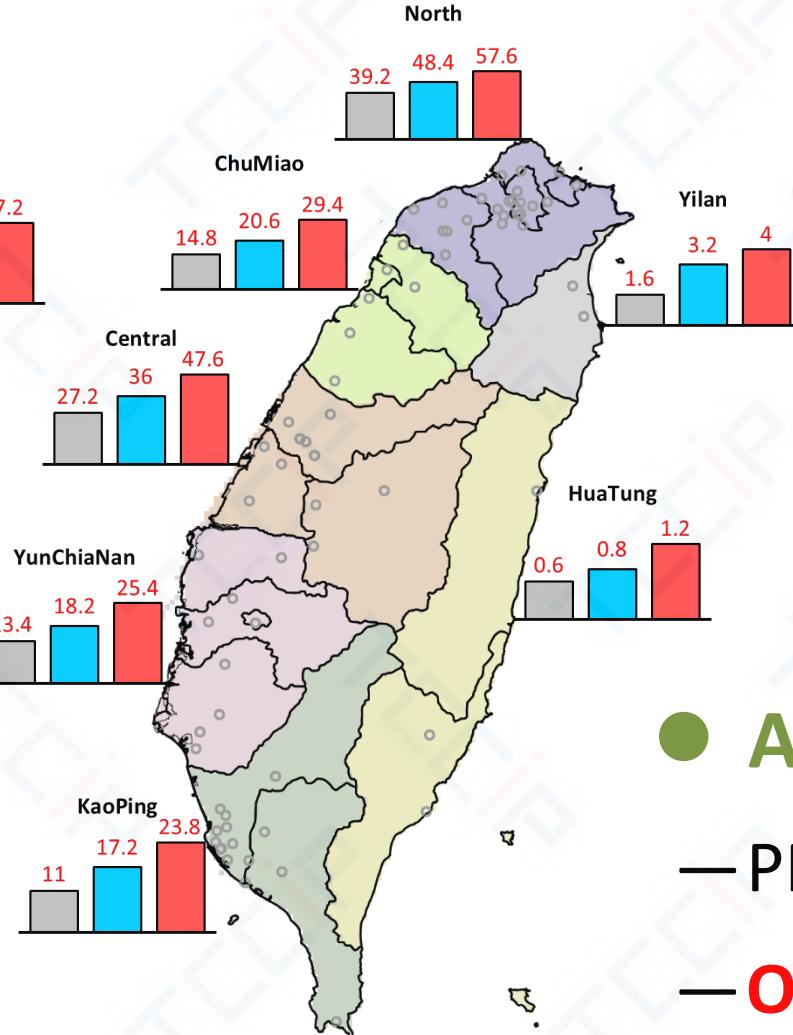

PM_{2.5} & O₃ 變化

AQI(PM_{2.5}) > 100 days/yr

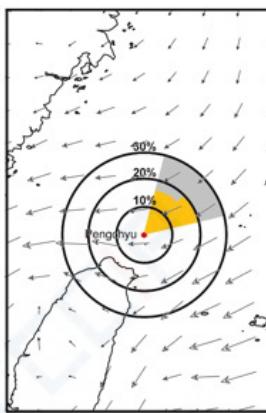

AQI(O₃) > 100 days/yr

- AQI > 100 days/yr :

- PM_{2.5}(2C,4C) : +0.3%, -0.9%
- O₃(2C,4C) : +33%, +75%

大氣擴散情況

■ Air Stagnation Index (ASI) AQI > 100 days

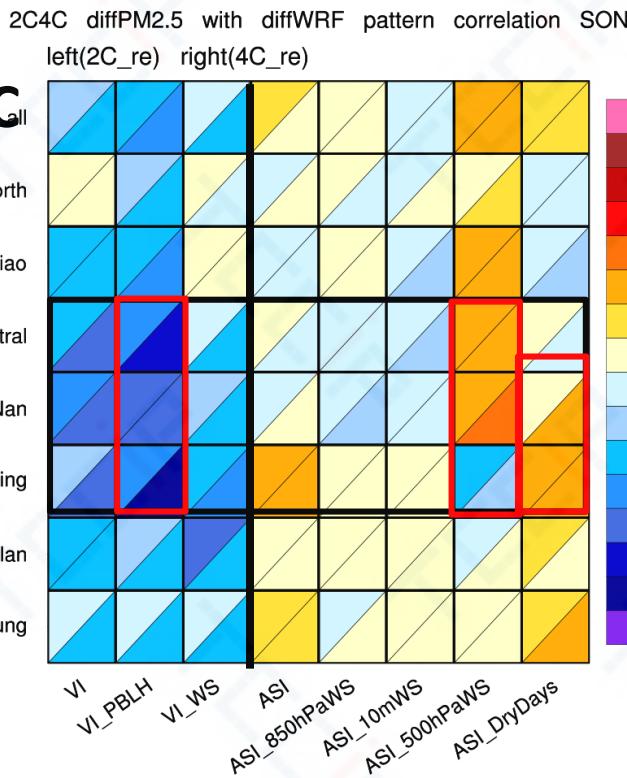

- Daily-mean near-surface (10-m) wind speeds $< 4.0 \text{ m s}^{-1}$
- Daily-mean 850 hPa wind speeds $< 5 \text{ m s}^{-1}$
- Daily-mean precipitation accumulation is $< 1 \text{ mm}$ (i.e., a dry day)

■ Ventilation index (VI) AQI > 100 days

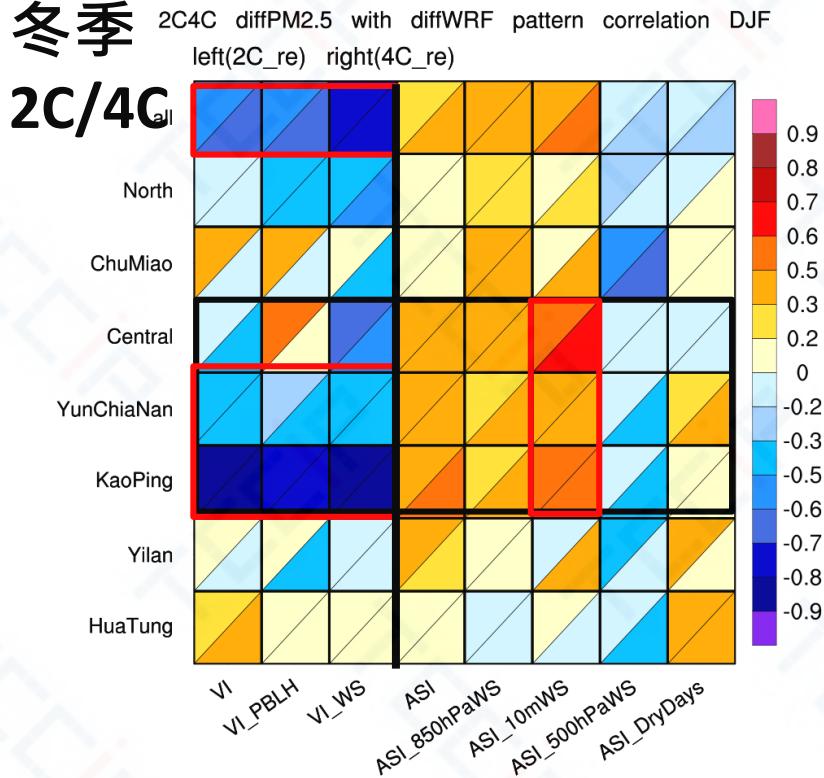

$$VI = PBLH \times WS_{\text{mean}}_{PBLH} \quad (\text{HGT} < 500\text{m})$$

PM_{2.5} 變化

秋季
2C/4C

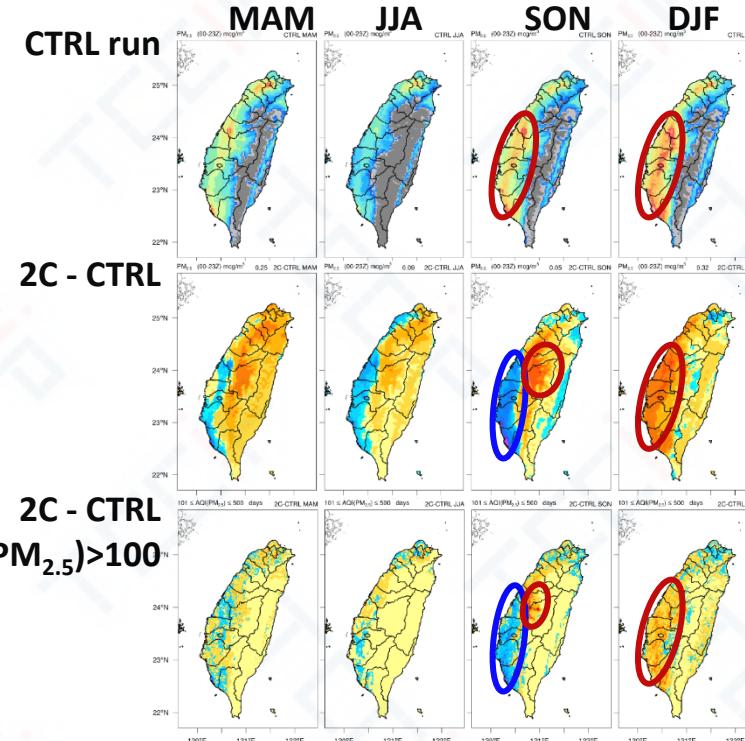

冬季
2C/4C

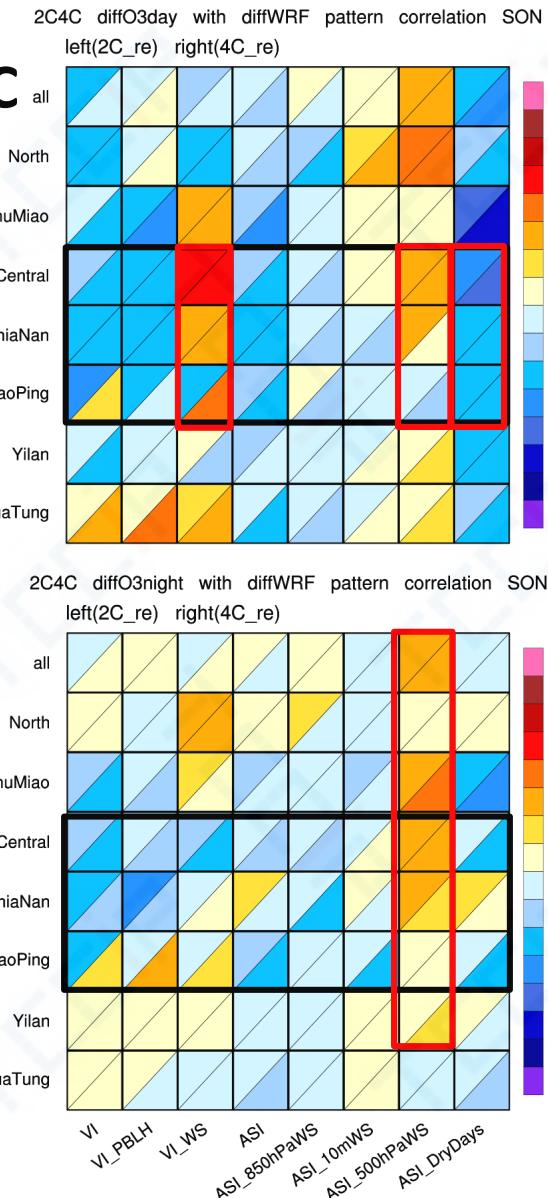

■ PM_{2.5} (HGT < 500m)

- Autumn : PBLH, low-level wind speed, precipitation (Dry day)
- Winter : PBLH, low-level wind speed

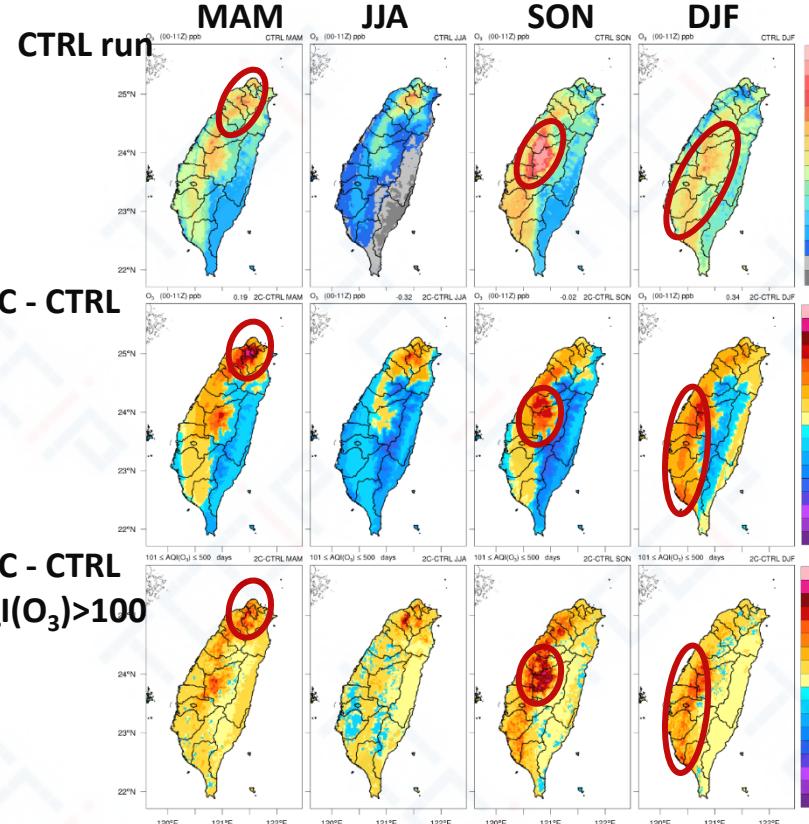

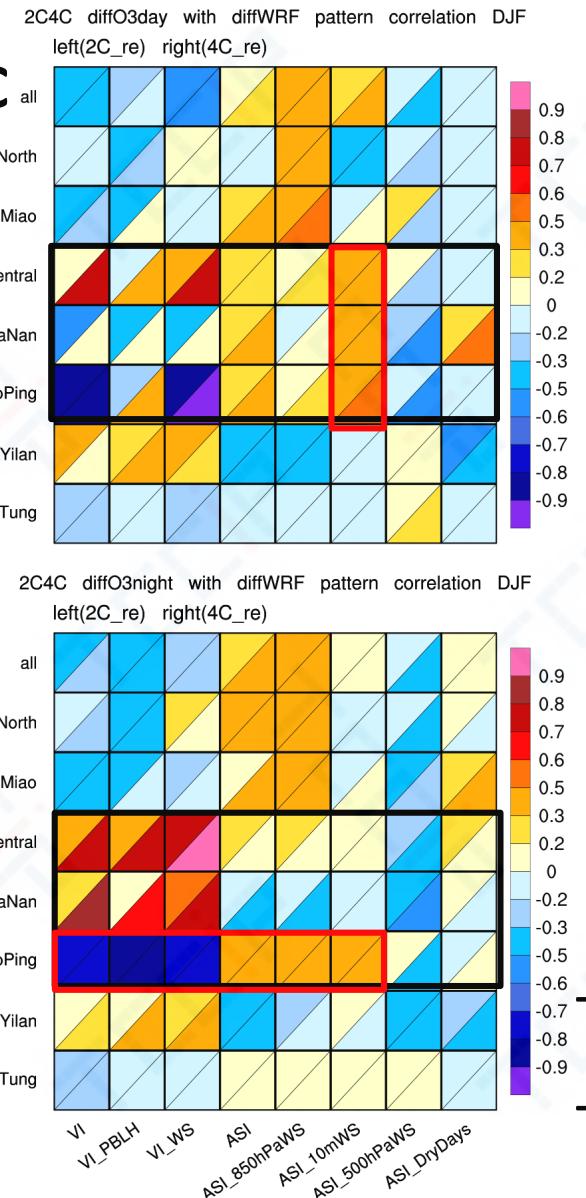

O₃ 變化

秋季
2C/4C

冬季
2C/4C

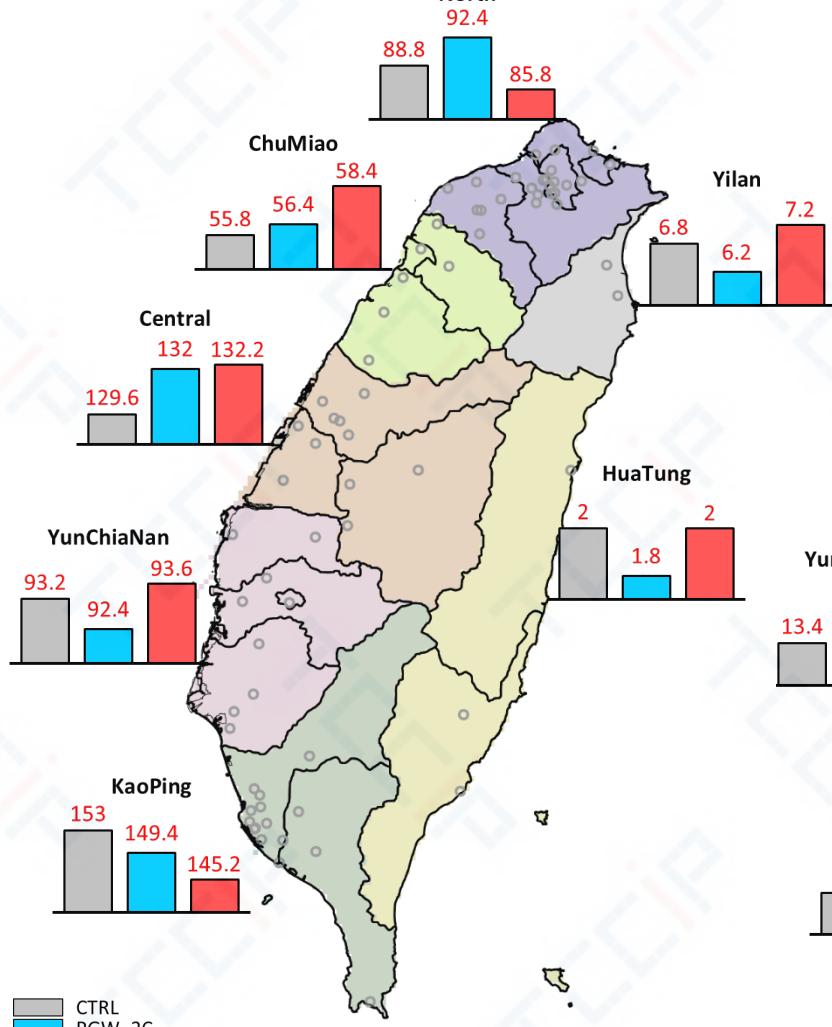

O₃ (HGT < 500m)

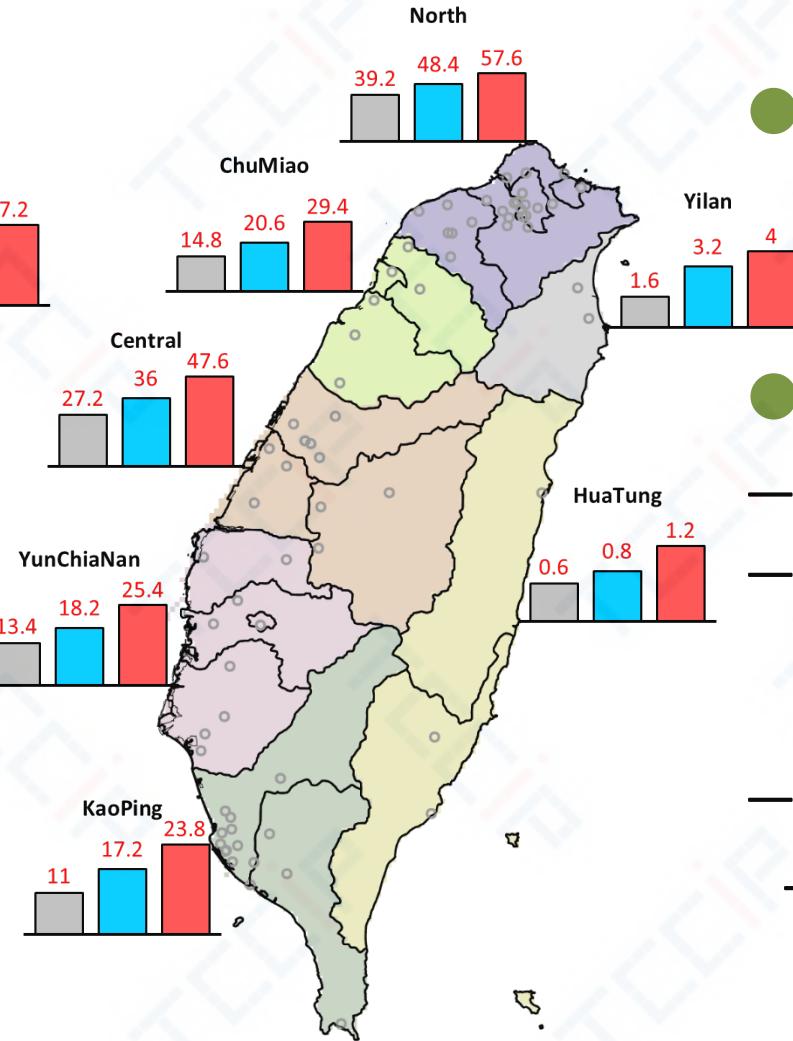

- Autumn : mid-level wind speed,
- Winter : low-level wind speed

小結

$AQI(PM_{2.5}) > 100 \text{ days/yr}$

$AQI(O_3) > 100 \text{ days/yr}$

- $AQI > 100 \text{ days/yr} :$

- $PM_{2.5}(2C,4C) : +0.26\%, -0.9\%$
- $O_3(2C,4C) : +33\%, +75\%$

- More polluted days

- Less NE events
- $PM_{2.5}$
PBLH, precipitation (Dry day), low-level wind speed
- O_3
Low- and mid-level wind speed, precipitation (Dry day)
